## Experience

### Eldis, software engineer, 10/2019 - 12/2019

<http://eldis.ru>

I developed a declarative decoder for the internal binary document format, covered it with tests, including property-based testing.

Scala, scodec, cats, fs2, decline, specs2, scalacheck

### Neolab-Nsk, fullstack developer, 01/2019 - 09/2019

<https://www.neolab.io>

I've implemented new functionality in existing web applications, fixed defects and developed new applications and microservices, covered them with unit tests and integration tests.

Frontend: TypeScript, React, Redux, Saga, RxJS, FP-TS

Backend: TypeScript, Node, Redux, Saga, RxJS, Redis, Lua, Mongo, PostgreSQL, Clickhouse, Docker

### SocialSweet Inc, frontend developer, 08/2018 - 01/2019

<https://sweet.io>

Sweet's product is a loyalty platform, social network and online store.

I performed tasks related to business logic at the front end and was engaged in covering the existing code with unit tests and tuning them, thanks to which the tests were launched using CI pipeline, and the defects associated with unsuccessful merging of Git branches in a huge codebase really began to be prevented.

TypeScript, Angular, RxJS

### Allmax, frontend developer, 11/2017 - 08/2018

<https://apps.apple.com/ru/app/savl/id1369912925>

I worked in the Savl project – this is a mobile application, wallet with support for 6 cryptocurrencies.

I was responsible for the data layer in the mobile application. I applied everything that I learned from books about functional programming and software design, and also completely covered the business logic with tests, as a result of which the application became fault-tolerant and modular, that is, it stopped crashing due to exceptions or unexpected behavior of external services, and allowed to enable and disable support for individual cryptocurrencies at any time. Also inside the company, I made several presentations on functional programming.

JavaScript, Flow, React Native, Redux, Saga, Ramda, Sanctuary, Socket.io

## Other

I organise meetups with practice, code review and FP reading group

[https://meetup.com/fp\\_specialty\\_nsk](https://meetup.com/fp_specialty_nsk)

Translated **Mostly Adequate Guide to Functional Programming in JavaScript** into Russian

<https://github.com/MostlyAdequate/mostly-adequate-guide-ru>

## About

I see my future in working with functional languages that implement strict static typing. I actively use Scala, Haskell and Elm, but am also ready to take on any other typed functional language, for example: OCaml, Idris, F #, PureScript. I associate the success in my career with FP, so I will invest a lot of my time and attention in ensuring that FP brings benefits to both companies and individual specialists.

I'm ready to regularly explain everything that I understand myself, and to pay time and attention not only to the code, but also to people. I consider pair programming and pair testing to be an effective practice.

## Education and courses

**Mastering Haskell Programming**

<https://www.udemy.com/certificate/UC-DRMAMQ5>

Packt, 2019

**Functional Programming in Haskell, part 2**

<https://stepik.org/cert/207739> (certificate with distinction)

Computer Science Center, 2019

**Functional Programming in Haskell, part 1**

<https://stepik.org/cert/196007> (certificate with distinction)

Computer Science Center, 2019

**Computer Science Summer School, Theory of Programming Languages**

Novosibirsk State University, 2019

**Maintenance of computer equipment and computer networks**

Novosibirsk Aviation Technical College, 2004 - 2008
